

For a great listening experience in every room with **ONE** wire

Think Sonnex

 Sonnex™ is the brand to think of for your next whole home audio project. It's simply the best-sounding all-in-one multi-zone audio solution, revolutionizing installation with simple 1-wire distribution.

The complete Sonnex solution begins with a 24x8 matrix switcher that includes a high-powered amp, pre-amp and advanced DSP, using just four rack spaces. You can transmit all 24 sources over a single CAT5e cable to localized 4 or 8 zone expanders. Crestron fiber extenders are available for longer runs for outdoor areas such as a pool cabana or patio as well as large commercial installations like restaurants, sports bars, night clubs, hotels, and banquet halls.

One CAT5e wire connects audio to additional zones in the house.

Easy Installation Saves You Time and Money

Sonnex is the only solution that provides one-wire audio transport over CAT5e wire or fiber optic cable. All you have to do is run the single CAT5e from the switcher to a local expander. Gone are the days of pulling speaker wires through walls, basements and ceilings. No more big bundles of cables. You get a complete whole home audio experience in a fraction of the time, enabling you to move on to your next job faster.

Fully Scalable to Fit Any Space

Sonnex is a complete and fully scalable solution that includes both amplified and unamplified expanders, ideal for routing audio to AV receivers, powered subwoofers, and other audio equipment. Expansion units can be placed centrally or remotely. Start with the SWAMP-24X8 at your head end, and add up to eight room expanders for an astounding 74 stereo zones of robust, audiophile sound quality.

Simple Integration With All Sources

Sonnex expands the reach of your portable music way beyond your earbuds. Customers can wirelessly stream and control audio from virtually any source, including the Apple® iPhone® or iPad®, PCs and Android® devices and enjoy it in up to 74 zones. They can get even more control of their entertainment by adding a Crestron control system and touch screens.

Sound, The Way You Want It

Sonnex makes programming simple, too. Using the included Sonnex Tools, you can set the equalization levels on a zone-by-zone basis. And using our speaker profiles you can fine-tune the sound to the speakers for an optimal listening experience.

Think Sonnex

For whole home audio, think Sonnex, the one all-in-one solution that delivers a state-of-the-art listening experience for your customers. And the only solution that delivers one-wire transport from 24 sources to up to 74 zones, speeding your installations and saving you money.

Sonnex Products

SWAMP-24X8 - Sonnex Multiroom Audio System

- 140 Watts/Ch. @ 8 Ohms, 400 Watts/Ch. bridged
- Provides eight amplified stereo zone outputs
- Includes 12 unbalanced, 4 balanced/unbalanced, and 8 SPDIF inputs
- Installer adjustable 5-band graphic or parametric EQ per zone
- Low power consumption, cool-running operation

SWAMPE-8 - Sonnex 8-Zone Multiroom Audio Expander

- 140 Watts @ 8 Ohms and 240 Watts @ 4 Ohms per channel
- Bridgeable for 400 Watts per channel at 8 Ohms.
- Connect up to 8 expanders for 74 zones
- 3-rack spaces for mounting

SWAMPE-4 - Sonnex 4-Zone Multiroom Audio Expander

- Same specifications as the 8-zone at half the size for smaller environments

Sonnex Multiroom 8-Zone Unamplified Audio Expansion Switcher

- Ideal for routing audio to AV receivers, powered subwoofers, and other audio equipment

Sonnex Link over Fiber Extender

- Extends the Sonnex Link up to 2000 ft over fiber
- Works reliably without any programming or configuration

Sonnex Output Transformers

- Allows the use of 70 or 100 Volt speakers with any Sonnex system
- Enables the connection of multiple speakers to a single amplifier output
- 2 and 4 channel models available
